

TABLE 1. REGRESSIONS BASED ON ASEC DATA

		Men			Women			Both		
		1981	1982	1983	1981	1982	1983	1981	1982	1983
Weekly earnings (1980 \$)	Mean, change since 1980	-0.11 (0.58)	-0.31 (0.12)	-0.42 (0.06)	-0.21 (0.32)	-0.21 (0.22)	-0.00 (0.99)	-0.17 (0.28)	-0.26 (0.09)	-0.25 (0.14)
	Adjusted mean, change since 1980	-0.05 (0.80)	-0.37 (0.09)	-0.49 (0.04)	-0.09 (0.72)	-0.06 (0.84)	0.07 (0.80)	-0.10 (0.58)	-0.25 (0.20)	-0.31 (0.11)
	Adjusted 3-year mean, change since 1977-79		-0.39 (0.00)			0.01 (0.95)			-0.22 (0.03)	
Hourly wages (1980 \$)	Mean, change since 1980	-0.04 (0.83)	-0.29 (0.13)	-0.36 (0.09)	0.07 (0.58)	0.02 (0.91)	0.23 (0.22)	-0.01 (0.92)	-0.17 (0.23)	-0.14 (0.38)
	Adjusted mean, change since 1980	-0.02 (0.91)	-0.35 (0.08)	-0.44 (0.05)	0.17 (0.35)	0.04 (0.84)	0.23 (0.28)	0.02 (0.91)	-0.21 (0.18)	-0.20 (0.24)
	Adjusted 3-year mean, change since 1977-79		-0.36 (0.00)			0.11 (0.27)			-0.17 (0.04)	

Heteroskedasticity-robust *p* values in parentheses. "Adjusted mean" regressions include fixed effects for cities and 5-year age groups. "Adjusted mean, 3-year" statistics, displayed in the 1982 columns, are changes from 1977-79 to 1981-83. Changes are in logs for earnings and wages and in percentages for employment and unemployment. Construction of samples and earnings variables follows Borjas (2015). Samples cover Miami and the Borjas "employment placebo" comparison cities: Anaheim, Rochester, Nassau-Suffolk, and San Jose. Regressions incorporate Census Bureau-provided sampling weights.

TABLE 2. REGRESSIONS BASED ON ORG DATA

		Men			Women			Both		
		1981	1982	1983	1981	1982	1983	1981	1982	1983
Weekly earnings (1980 \$)	Mean, change since 1980	-0.14 (0.16)	-0.20 (0.06)	-0.32 (0.01)	0.10 (0.51)	0.03 (0.88)	0.08 (0.62)	-0.02 (0.81)	-0.12 (0.25)	-0.16 (0.12)
	Adjusted mean, change since 1980	-0.08 (0.47)	-0.18 (0.12)	-0.35 (0.00)	0.21 (0.24)	0.14 (0.46)	0.14 (0.47)	0.07 (0.55)	-0.03 (0.79)	-0.15 (0.20)
	Adjusted 3-year mean, change since 1977-79		-0.18 (0.02)			0.23 (0.02)			-0.01 (0.83)	
Hourly wages (1980 \$)	Mean, change since 1980	-0.13 (0.15)	-0.18 (0.08)	-0.26 (0.01)	0.02 (0.83)	-0.04 (0.66)	0.00 (0.96)	-0.06 (0.44)	-0.13 (0.09)	-0.15 (0.05)
	Adjusted mean, change since 1980	-0.09 (0.36)	-0.17 (0.13)	-0.31 (0.00)	0.11 (0.30)	0.05 (0.65)	-0.01 (0.92)	0.01 (0.91)	-0.07 (0.43)	-0.18 (0.03)
	Adjusted 3-year mean, change since 1977-79		-0.15 (0.02)			0.06 (0.31)			-0.07 (0.20)	
Unemployment (%)	Mean, change since 1980	6.33 (0.05)	12.50 (0.01)	10.48 (0.01)	-0.70 (0.84)	9.72 (0.10)	10.42 (0.07)	3.84 (0.11)	11.45 (0.00)	10.49 (0.00)
	Adjusted mean, change since 1980	2.49 (0.54)	7.59 (0.17)	5.95 (0.22)	-3.00 (0.55)	7.61 (0.28)	-0.31 (0.97)	0.71 (0.83)	7.48 (0.08)	3.47 (0.39)
	Adjusted 3-year mean, change since 1977-79		-0.57 (0.88)			-0.14 (0.97)			-0.52 (0.85)	
Employment (%)	Mean, change since 1980	-4.07 (0.56)	-9.87 (0.19)	-1.91 (0.78)	3.05 (0.72)	-1.04 (0.90)	0.24 (0.98)	1.31 (0.83)	-5.25 (0.38)	-1.02 (0.87)

Adjusted mean, change since 1980	-4.10 (0.61)	-10.76 (0.21)	-1.68 (0.83)	1.01 (0.92)	-4.73 (0.61)	1.37 (0.88)	0.26 (0.97)	-8.20 (0.23)	-0.96 (0.89)
Adjusted 3-year mean, change since 1977-79		4.84 (0.33)			-4.83 (0.40)			-1.64 (0.69)	

Heteroskedasticity-robust p values in parentheses. "Adjusted mean" regressions include fixed effects for cities and 5-year age groups. "Adjusted mean, 3-year" statistics, displayed in the 1982 columns, are changes from 1977-79 to 1981-83. Changes are in logs for earnings and wages and in percentages for employment and unemployment. Construction of samples and earnings variables follows Borjas (2015). Samples cover Miami and the Borjas "employment placebo" comparison cities: Anaheim, Rochester, Nassau-Suffolk, and San Jose. Regressions incorporate Census Bureau-provided sampling weights.
